

CV

#RESEARCH #Admin #Career

Note to self

I have previously tried to fully automate CV construction (reading in tables of publications, jobs, grants etc) but the main reason for this is to programatically grab the latest list of publications. Nothing else on the CV is (a) served via an API or (b) so rapidly changing that it needs to be 'fully auto'.

However, I now feel that it's more professional to only show selected publications and link out to Google Scholar for a complete list. Therefore I have now switched to a more manual approach using Overleaf.

The link is here:

<https://www.overleaf.com/4961922541mvfhjnbrtvwd#912c02>

Updating CV

Grab new publications

This uses a script I found on GitHub called orcid2bib.py.

I've put this in a repo called [pubupdate](#).

With pubupdate env activated

```
python orcid2bib.py 0000-0002-0408-5801 -o pubs.bib
python bib2cv.py pubs.bib pubs.xlsx --highlight-name
Cranley_J
python citations.py A5023528834 -o citations.txt
```

Update publications info in the LaTeX

Now you can copy paste the (1) publications and (2) data (H-index, citations) you want into publications.tex file in the CV.

Note, the asterisks denoting first-author need to be manually added.

Update the CV on my website

Render the CV as PDF.

Clone my website.

```
git clone git@github.com:james-cranley/james-  
cranley.github.io.git
```

Replace the old ./cv/cv.pdf with the new file.

Push the update

```
# in the root  
git add .  
git commit -m "cv update"  
git push
```

Now it should be visible on <https://james-cranley.github.io>
